

/heartbeat

Overview

The /heartbeat call is used to validate service functionality.

GET /heartbeat

This call will return the number of configured agents. This value can only be used to verify that the service is responding to requests. The value itself should not be used as confirmation that the configuration is correct.

Request

Parameters: none

Response

Headers

A custom 'X-Ganymede-Agentcount' header is set that contains the same value as in the JSON document. This allows testing the service using just a HEAD request, if desired.

```
X-Ganymede-Agentcount: 7
```

Status:

- 200 OK - API was successful
- 400 Bad Request - You included information that the server could not process (a query string, missing headers, etc.)
- 401 Unauthorized - The username/password was incorrect.
- 403 Forbidden - You are not authorized to make this API call.
- 404 Not Found - The resource you were looking for was not found.
- 500 Internal Server Error - A problem in the server prevented completion of the request.
- 503 Service Unavailable - A resource or capacity problem prevented completion of the request.

Body

A JSON document with a count of all configured agents.

```
{"num": 11}
```
